Top Barriers to Housing

Adverse Childhood Experiences (ACEs)

Adverse Childhood Experiences (ACEs) is the term used to describe all types of abuse, neglect, and other potentially traumatic experiences that occur during childhood.

66% of individuals who have been in the criminal justice system reported they experienced at least 1 adverse childhood experience

68% of domestic violence survivors reported they had experienced at least 1 adverse childhood experience

* As the number of ACEs increases, so does the risk for chronic health conditions, unsafe behaviors, and shorter life expectancy.
